

Spin-on filter according to Bosch Rexroth standard:

Type 50 SL 30 to 80D

RE 51476

Edition: 2019-12

Nominal sizes: 30 to 80DConnection up to G1; SAE 10

Features

Spin-on filters are used in hydraulic systems for separating solid material from fluids and lubricating oils.

They come with the following features:

- ► Filter for inline installation
- ► Optimized for mobile hydraulics, space-saving, service-friendly
- ▶ Installation in suction, pressure or return lines possible
- ► Special, highly efficient filter materials
- ► Filtration of ultra-fine particles and high dirt holding capacity
- ▶ Optional version with maintenance indicator
- ▶ Optional bypass valve integrated in the filter housing
- ► Spin-on element 82 with various connections available as spare part

¹⁾ Measured pressure differential across filter and measuring equipment in accordance with ISO 3968. The measured pressure differential at the maintenance indicator is lower.

Filter design

Easy selection of the filter size is made possible by the FilterSelect online tool. The filter can be designed using the operating pressure, flow and fluid system parameters. The required filter rating is based on the application, the sensitivity to contamination of the components and the environmental conditions.

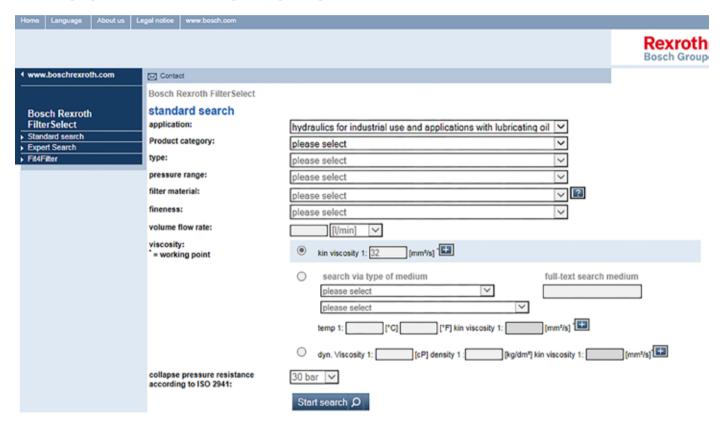

The program leads you through the menu on a step-by-step basis.

A documentation of the filter selection can finally be created in the form of a PDF file. This file contains the entered parameters, the designed filter with material number including spare parts, and the pressure loss curves.

Link FilterSelect:

http://filterselect.boschrexroth.com/rexfilter/

Other languages can be selected using the page navigation.

Symbols

(Dimensions in mm [inch])

Spare part	Drawing	Ordering code in the type key	Symbol
Optical/electrical with connector	PG9 PG9	М	10 03 A B

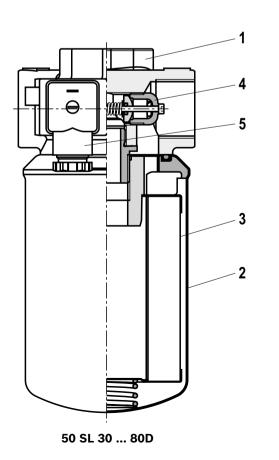

Function, cross-section

The spin-on filter is suited for direct installation in pressure or return lines. It is installed upstream from components to be protected.

It consists primarily of a filter head (1), a threaded spin-on element (2) with built-in filter element (3). Optionally, a maintenance indicator (5) and a bypass valve (4) can also be configured for the filter.

The maintenance indicator housing is integrated in the filter head.

The fluid passes through the inlet to the spin-on element, where it is cleaned. Any dirt particles filtered out collect in the filter element. The filtered fluid then enters the hydraulic circuit through the outlet.

RE 51476, edition: 2019-12, Bosch Rexroth AG

The maintenance indicator is not offered as a spare part as it is integrated in the filter head.

Assembly, commissioning, maintenance

Installation

- ► The max. operating pressure of the system must not exceed the max. operating pressure of the filter (see type plate).
- During assembly of the filter the flow direction (direction arrows) and the required servicing height of the spin-on element (see chapter "Dimensions") are to be considered.
- ► Element replacement is made easiest when the spin-on element is oriented downward with the installation position.
- ▶ Remove the plastic plugs from the filter inlet and outlet.
- ► The connection of the electrical maintenance indicator is via a mating connector that is attached to the maintenance indicator contacts and held by a screw.

Commissioning

► Commission the system.

The filter has no bleeding mechanism.

Maintenance

- ▶ If the switching operation is triggered in the electrical maintenance indicator, this means the spin-on element is contaminated and will require replacing. Spin-on elements must be replaced after 6 months at latest or a max. of 1,000 operating hours.
- ► The material number of the correct spin-on element is on the name plate of the complete filter. Verify that it matches the material number on the spin-on filter.
- ▶ Decommission the system.
- ▶ Release operating pressure on the system side.

™ Note:

The filter has no bleeding mechanism.

- ▶ Unscrew the spin-on element.
- ▶ Screw on the new spin-on element hand-tight.
- ▶ Please note:

If necessary, carefully tighten it by 30° in the depressurized state (use a band wrench where necessary)

- ► Commission the system.
- ► If filter loosens between the spin-one element and filter head after commissioning, the spin-on element will need to be tightened up.

Application notes:

- ► Under dynamic loads, the spin-on element housing could be elastically deformed.
- ► Spin-on elements are not rigid.

A WARNING!

- ▶ Only install or remove when system is not pressurized.
- ► Tank is pressurized!
- ▶ Only remove spin-on element when it is not pressurized.
- ► Do not replace maintenance indicator when filter is pressurized.
- Failure to observe flow of direction during assembly will cause filter element to be damaged beyond repair.
 Particles will enter the system and damage downstream components.

Important:

- ▶ Only trained specialists may work on the filter.
- ► Proper function and safety are only guaranteed if original Bosch Rexroth spin-on elements and spare parts are used.
- ▶ Warranty becomes void if the delivered item is

changed by the ordering party or third parties or improperly mounted, installed, maintained, repaired, used or exposed to environmental condition that do not comply with the installation conditions.

Minimum screw-in depth mounting	mm [inch]		8 [0.3]		

Directives and standardization

Product validation

Rexroth filters, the filter elements built into them and filter accessories are tested and quality-monitored according to different ISO test standards:

Pressure pulse test	ISO 10771:2015-08
Filtration performance test (multipass test)	ISO 16889:2008-06
Δp (pressure loss) characteristic curves	ISO 3968:2001-12
Compatibility with hydraulic fluid	ISO 2943:1998-11
Collapse pressure test	ISO 2941:2009-04

The development, manufacture and assembly of Rexroth industrial filters and Rexroth filter elements is carried out within the framework of a certified quality management system in accordance with ISO 9001:2000.

Classification according to the Pressure Equipment Directive

The spin-on filters for hydraulic applications according to 51476 are pressure holding equipment according to article 1, section 2.1.4 of the Pressure Equipment Directive 97/23/EC (PED). However, under Article 1 Section 3.6 PED, hydraulic filters are exempt from the PED if they are not classified higher than Category I (Guideline 1/19).

The fluids from the chapter "Compatibility with approved pressure fluids" were considered for the classification. The intended use is only permitted with fluids in group 2 and within the specified operating limits (see "Technical data").

These filters do not receive a CE mark.

Use in explosive areas according to Directive 94/9/EC (ATEX)

The spin-on filters without maintenance indicator according to 51476 are no equipment or components in the sense of directive 94/9/EC and are not provided with a CE mark. It has been proven with the ignition risk analysis that these spin-on filters do not have own ignition sources acc. to DIN EN 13463-1:2009.

The spin-on filters without maintenance indicators can be used for the following explosive areas:

	Zone suitability			
Gas	1	2		
Dust	21	22		

Complete filter without maintenance indicator						
Use /as	signment	Gas 2G	Dust 2D			
Assignment 1)		Ex II 2G c IIC TX	Ex II 2D c IIC TX			
Medium conductivity pS/m	min.	300				
Dust accumulation	max.	1	0.5 mm			

¹⁾ TX = max. temperature range: see chapter "Technical data"

Directives and standardization

A WARNING!

- ► Explosion hazard due to high temperature!

 Temperature is based on temperature of medium in hydraulic circuit and cannot exceed this value. Take steps to make sure max. admissible ignition temperature is not exceeded in explosive area.
- ► When using the spin-on filters according to 51476 in explosive areas, sufficient equipotential bonding has
- to be ensured. Grounding the filter with mounting screws is recommended. It has to be noted in this connection that paintings and oxidic protective layers are not electrically conductive.
- During spin-on filter replacement, the packaging material is to be removed from the replacement element outside the potentially explosive area

- ► Maintenance may only be performed by specialists on instruction of the owner in accordance with Directive 1999/92/EC Annex II Section 1.1.
- ► Functional and safety warranty is only applicable when using genuine Rexroth spare parts

Environmental safety and recycling

- ► The used spin-on element should be disposed of in accordance with the respective country-specific legal regulations of environmental protection.
- ▶ After completion of the filter life, the components of the filter, in accordance with the respective country-specific legal regulations of environmental protection, should be recycled.
